

What is Activate?

Activate is essentially very old compost. It helps speed up mother-natures process of decomposing the grass clippings and thatch as well as lowering the acidity in our soil. Over time, this helps break up our clay soil and allows plants to pull the available nutrients from the soil. Another added attribute is Activate helps improve the growth of beneficial micro-organisms which are crucial to a healthy yard and garden. Remember, Activate speeds up the decomposition process, therefore it eliminates the need to thatch or aerate the yard!

We recommend applying it twice a year if you bag your clippings, and three times a year if you mulch your yard when you mow. It does not matter when you apply the product.

Coverage:

Established Lawns:

40# bag covers 4,000 sq. ft.

New Lawns:

10 to 15 lbs per 1,000 sq. ft.
prior to soil preparation.
